

Make **work less** work.

NORMAN SIDE LIFTER

Get More From Your Truck

Comtruk® started in 1978 as a pioneer of the Australian “ute tray”, a truck bed with operable sides and tailgate. Today, we’re re-imagining the way hard-working, hard-playing people use their pickups and trucks to haul commercial and recreational loads with high performance operable truck beds, racking systems, and the Norman side lifter.

Learn how Comtruk can lighten the workload for your fleet.

NORMAN side lifter

The Norman side lifter boosts fleet productivity by streamlining cargo handling. Designed for efficiency and safety, it allows drivers to load and unload cargo or equipment directly onto the truck bed. It reduces downtime, labor costs, and damage risk while improving the delivery process. Built tough, it's a smart investment for fleets that value versatility and operational control across diverse job sites.

A Lifter That Delivers

- ◆ Light
- ◆ Strong
- ◆ Max payload
- ◆ Remote control with safety lock
- ◆ System enclosed within lift arm
- ◆ Increases safety
- ◆ Large platform

A Smarter Way To Lift Loads

The Norman side lifter is lightweight, yet strong. It features a large load platform with safe and user friendly controls. It's an efficient and effective cargo handling resource for commercial fleets to safely increase productivity.

Loading & Unloading

Make it possible for one person to safely lift, load, secure and unload heavy, bulky items like hot water heaters, oil drums, pool chemicals, or heat pumps.

Safety

No need for manual lifting of heavy objects. The side lifter can secure cargo in place during transport, preventing it from shifting, reducing risk of injury and cargo damage.

Compatibility

The lifter can be fitted to most steel and aluminum flatbeds and tray decks installed on mid- and full-size trucks.

Models

The Norman side lifter is available in two models:

- electrically actuated drive motor lifter
- 47" stroke heavy-duty hydraulic lifter
